

1. Write Playwright code to select an item from a dropdown using visible text, value, and index.
2. Handle alerts in Playwright: accept, dismiss, capture prompt.
3. Extract all links (<a> tags) and print text + href.
4. Upload multiple files using Playwright.
5. Wait for an element to stop moving (animation).
6. Verify if an element is disabled or enabled.
7. Handle iFrames and interact inside them.
8. Count rows & columns in a table; print all cell values.
9. Scroll to bottom until dynamic content loads.
10. Capture console errors from browser logs.
11. Handle multiple popup windows & close all.
12. Take element-level screenshot.
13. Mock API response using page.route() and validate UI.
14. Wait for network idle before asserting UI.
15. Assert CSS color using evaluate().
16. Retry click using Playwright's auto-waiting.
17. Generate storageState using UI login.
18. API login & inject token into browser context.
19. Handle Shadow DOM elements.
20. Select date from dynamic date picker.
21. Measure page performance timings.
22. Multi-tab workflows automation.
23. Interact with canvas using coordinates.
24. Create reusable custom waits (loader, stable element).
25. Validate text that appears after async API call.
26. Intercept request, modify headers, and continue.
27. Detect broken images.
28. Handle WebSocket messages.
29. Run same spec on Chromium, Firefox, WebKit.
30. Capture HAR file.
31. Create custom Playwright test fixture for login & POM injection.
32. Build wrapper utilities for click/type/waits.
33. Create PageObject + Facade flow for Add to Cart.
34. Implement dynamic ENV execution (ENV=qa).
35. CI/CD pipeline scripting for multi-env execution.
36. Handle popup appearing randomly after delay.
37. Validate dynamic JSON response structure.
38. Handle button enabled only after slider reaches 100%.
39. Auto-suggestion dropdown handling.
40. Custom retry logic for failed steps.
